Visualize the data using Python libraries matplotlib, seaborn by plotting the graphs for assignment no. Heart Diseases data sets.

In [1]:
```
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import numpy as np
```

In [2]:
```
heart = pd.read_csv('dataset_Heart.csv')
```

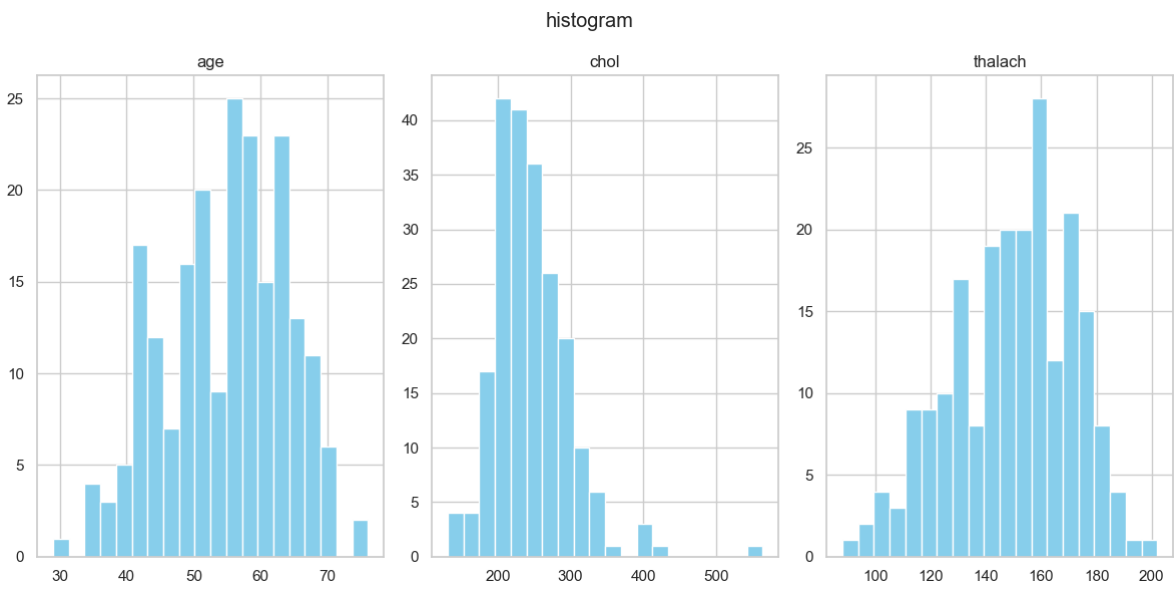
In [3]:
```
print("columns in the dataset:")
print(heart.columns)
```

```
columns in the dataset:
Index(['age', 'sexe', 'cp', 'trestbps', 'chol', 'fbs', 'restecg', 'thalach',
       'exang', 'oldpeak', 'slope', 'ca', 'thal', 'target'],
      dtype='object')
```

In [4]:
```
heart['binary_target'] = heart['target'].apply(lambda x: 0 if x ==0 else 1)
```

In [5]:
```
sns.set(style="whitegrid")
```

In [6]:
```
#Histogram
heart[["age","chol","thalach"]].hist(bins=20, figsize=(12,6), layout=
(1,3), color='skyblue')
plt.suptitle("histogram")
plt.tight_layout()
plt.show()
```



In [7]:
```
#KDE plot
for column in ["age", "chol", "thalach"]:
 sns.kdeplot(data=heart[column], fill=True)
 plt.title(f"KDE plot for {column}")
 plt.xlabel(column)
 plt.ylabel("Density")
 plt.show()
```
